1.4 Day 2 Homework

Set up the equations you would use to solve for x only! DO NOT SOLVE!

Equation: $3x = 4x - 10$

Equation: $10x + 6 + 12x + 4 = 180$

Equation: $10x + 4x = 88$

Equation: $4x + 3 = 10x + 12$

Equation: $14x + 8 + 6x + 4 = 180$

Equation: $10x + 12 = 30$

Equation: $14x + 8 = 10x + 2$

8. \overline{MQ} bisects $\angle AMP$, $\angle AMP = 40x + 10$, $\angle AMQ = 6x - 2$

Equation: $6x - 2 + 6x - 2 = 40x + 10$

Now... Please solve the problems completely!

9. A supplement of an angle is 3 times the complement of the angle. Find the angle.

$$180 - x = 3(90 - x)$$

$$180 - x = 270 - 3x$$

$$2x = 90$$

$$x = 45$$

10. An angle's measure is 6 degrees more than three times the measure of the complement. Find the measure of the complement.

$$x = 6 + 3(90 - x)$$

$$x = 6 + 270 - 3x$$

$$x = 276 - 3x$$

$$4x = 276$$

$$x = 69$$

$$\begin{array}{r} 90 \\ -69 \\ \hline 21 \end{array}$$

11. The measure of two supplementary angles are in a ratio of 7:5. What is the value of the smaller angle?

$$7x + 5x = 180$$

$$12x = 180$$

$$x = 15$$

$$5(15) = 75^\circ$$

12. An angle measures 12 degrees less than three times its supplement. Find the measure of the angle.

$$x = 3(180 - x) - 12$$

$$x = 540 - 3x - 12$$

$$x = 528 - 3x$$

$$4x = 528$$

$$x = 132$$

13. An angle is its own complement. Find the Measure of the supplement of the angle.

$$x = 90 - x$$

$$2x = 90$$

$$x = 45$$

$$180 - 45 = 135$$

14. Angle DEF and Angle FEG are supplementary. $m\angle DEF = 9x + 1$, $m\angle FEG = 8x + 9$. Find both angles.

$$9x + 1 + 8x + 9 = 180$$

$$17x + 10 = 180$$

$$17x = 170$$

$$x = 10$$

$$m\angle DEF = 91^\circ$$

$$m\angle FEG = 89^\circ$$
