

Geometry
Chapter 1 Study Guide

Name: Key ☺
Date: _____ Period: _____

1.1 Identify, name, and draw points, lines, segments, rays & planes. Apply basic facts about points, lines & planes.

Rate Your Understanding: 1 (Yikes!) 2 3 4 5 (I got this!)

1) Use the figure below to name the following figures:

answers will vary

DB a) A line

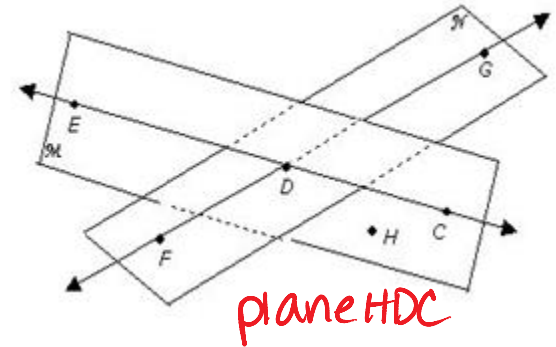

OE b) A ray

OD, OB c) Opposite rays

∠DOE, ∠EOA d) Only adjacent angles

∠DOC, ∠COB e) Adjacent and linear pair angles

2) Identify the plane containing D, E, and C.

3) Circle Always, Sometimes, or Never. Draw a picture to support your answer.

If two planes cross, then they cross at a point.

1.2 Use length and midpoint of a segment to solve algebraic problems.

Rate Your Understanding: 1 (Yikes!) 2 3 4 5 (I got this!)

4) Y is between X and Z, $XY = 5.8$ and $YZ = 12.4$. Find XZ.

$$XZ = 5.8 + 12.4$$

$$XZ = 18.2$$

5) L is the midpoint of \overline{MN} , $ML = 2x + 7$, and $LN = 3x - 3$. Find ML, LN, and MN.

$$\begin{aligned} ML &= 27 \\ LN &= 27 \\ MN &= 54 \end{aligned}$$

6) Circle Always, Sometimes, or Never. Draw a picture to support your answer.

If I is the midpoint of \overline{MN} , then I, M, and N are collinear.

1.3 Name and classify angles. Find the measure of the angle using interior and angle bisector.

Rate Your Understanding: 1 (Yikes!) 2 3 4 5 (I got this!)

7) Classify the following angles using the diagram below:

a) $\angle LIJ = \text{Right } \angle$

b) $\angle HIJ = \text{straight } \angle$

c) $\angle KIL = \text{acute } \angle$

8) \overline{TV} bisects $\angle STU$, $m\angle STV = \left(\frac{1}{4}x + 8\right)^\circ$

and $m\angle UTV = (x+2)^\circ$. Find $\angle STU$.

$$x+2 = \frac{1}{4}x+8$$

$$\frac{3}{4}x = 6$$

$$x = 8$$

$$m\angle STU = 20^\circ$$

9) D is in the interior of angle BAC. $\angle BAD = x^2$, $\angle CAD = 4x$, and $\angle BAC = 12$. Find x.

$$x^2 + 4x = 12$$

$$x^2 + 4x - 12 = 0$$

$$(x+6)(x-2) = 0$$

$$x = -6 \quad \boxed{x = 2}$$

If $x = -6$, then $m\angle BAD = (-6)^2 = 36^\circ$
 & $m\angle DAC = 4(-6) = -24^\circ$

If $x = 2$, then $m\angle BAD = 4^\circ$
 $m\angle DAC = 4(2) = 8^\circ$

1.4 Identify adjacent, vertical, complementary, and supplementary angles. Find measures of pairs of angles.

Rate Your Understanding: 1 (Yikes!) 2 3 4 5 (I got this!)

10) $m\angle F = 109^\circ$. Find the measure of the supplement of $m\angle F$.

$$180 - 109 = \boxed{71^\circ}$$

11) $m\angle K = (6x + 12)^\circ$. Find the measure of the complement of $\angle K$.

$$90 - (6x + 12) = 90 - 6x - 12 = \boxed{(78 - 6x)^\circ}$$

12) $m\angle ABC = (6x + 8)^\circ$ and $m\angle DEF = (12x - 8)^\circ$.

If $\angle ABC$ and $m\angle DEF$ are supplementary, find the measure of each angle.

$$6x + 8 + 12x - 8 = 180$$

$$18x = 180$$

$$x = 10$$

$$m\angle ABC = 68^\circ$$

$$m\angle DEF = 112^\circ$$

13) If $m\angle 1 = 5x + 32$ and $m\angle 3 = 3x + 64$ find $m\angle 4$.

$$3x + 64 = 5x + 32$$

$$32 = 2x$$

$$x = 16$$

$$180 - m\angle 1 = m\angle 4$$

$$180 - 112 = m\angle 4$$

$$\boxed{68^\circ = m\angle 4}$$

14) A supplement of an angle is 4 more than three times the complement of the angle. Find the measure of the complement of the angle.

$$180 - x = 3(90 - x) + 4$$

$$180 - x = 270 - 3x + 4$$

$$180 - x = 274 - 3x$$

$$180 + 2x = 274$$

$$2x = 94$$

$$x = 47$$

$$90 - 47 = \boxed{43^\circ}$$

1.6 Apply the midpoint and distance formulas.

Rate Your Understanding: 1 (Yikes!) 2 3 4 5 (I got this!)

- 15) M is the midpoint of PQ. P is at (1, -1) and M is at (7, -3). Find the coord. of Q.

- 17) Identify the slope given the points (-5, 6) and (-4, 0).

$$m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{0 - 6}{-4 - (-5)} = \frac{-6}{-4 + 5} = \frac{-6}{1} = -6$$

$m = \frac{2}{-3}$

- 19) The slope of the line $x = -2$ is undefined

- 20) The slope of the line $y = 4$ is zero.

- 16) Find the distance of PQ with endpoints P(1, -1) and Q(7, -3).

$$PQ = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

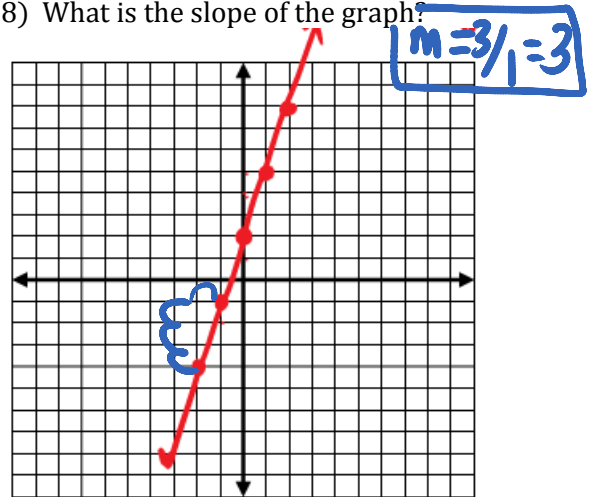

$$PQ = \sqrt{(7 - 1)^2 + (-3 - (-1))^2}$$

$$PQ = \sqrt{(6)^2 + (-2)^2}$$

$$PQ = \sqrt{36 + 4}$$

$$PQ = \sqrt{40} = 2\sqrt{10}$$

- 18) What is the slope of the graph?

1.7 Identify reflections, rotations, and translations. Graph transformations in the coordinate plane.

Rate Your Understanding: 1 (Yikes!) 2 3 4 5 (I got this!)

Identify the transformation as a reflection, rotation, or translation. Draw all necessary markings to justify.

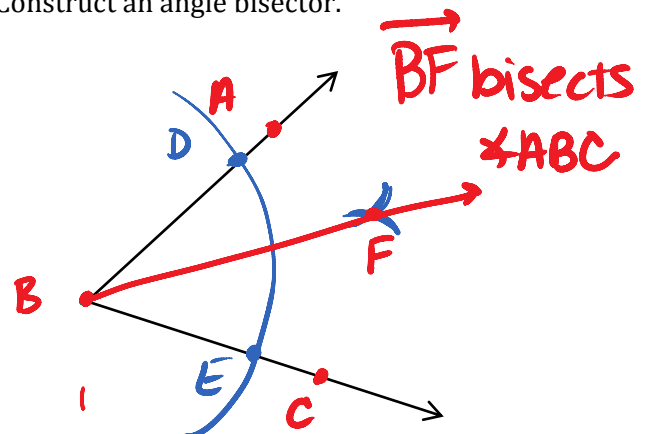

- 24) A figure has vertices at A(-1,4), B(-1,1), and C(3, 1). After a transformation, the image of the figure has vertices at A'(-1,-4), B'(-1,-1), C'(3,-1). Draw the preimage and image. Then identify the transformation.

Reflection over the x-axis

- 25) Construct an angle bisector.

Remember, completing the study guide is not enough practice! Make sure to look over your notes, homework, and in-class assignments to prepare for the Chapter test!!!
