

7.6 Partitions Homework

Page 512 #1-2

1. Find the point P along the directed line segment from point A to point B that divides the segment in the ratio 2 to 5.

① slope = $\frac{5-2}{5-(-6)} = \frac{3}{11}$ (rise) / (run)

② Point P is $\frac{2}{7}$ from point A to B .

③ Take $\frac{2}{7}$ of rise and run

rise = $\frac{2}{7}(3) = \frac{6}{7}$

run = $\frac{2}{7}(11) = \frac{22}{7} = 3\frac{1}{7}$

③ Find point $P \rightarrow \frac{6}{7}$ up from A , $3\frac{1}{7}$ right of A
 $A(-6, 2)$

$P(-6 + 3\frac{1}{7}, 2 + \frac{6}{7}) = P(-3\frac{4}{7}, 2\frac{6}{7})$
 or
 $P(-\frac{20}{7}, 2\frac{6}{7})$

2. Find the point P along the directed line segment from point A to point B that divides the segment in the ratio 1 to 6.

① slope = $\frac{-2-5}{6-(-4)} = \frac{-7}{10}$ (rise) / (run)

② Point P is $\frac{1}{7}$ away from A to B

③ Take $\frac{1}{7}$ of rise and run

rise = $\frac{1}{7}(-7) = -1$

run = $\frac{1}{7}(10) = \frac{10}{7} = 1\frac{3}{7}$

④ Point P is 1 unit down from A and $1\frac{3}{7}$ right from A

$A(-4, 5)$

$P(-4 + 1\frac{3}{7}, 5 - 1) = P(-\frac{18}{7}, 4)$
